E	CO-B	OND	HD100
Heavy Duty	Interior Exte	erior Adhesive	e and Sealant
PERFORMANCE SPECIF	CATIONS:		
Shear Strength	175 psi		
Tensile Strength	175 psi		
Elongation	350%		
Peel Strength pli 90 degree	12 pli		
Application Temperature (Frost free)	30		
Service Temperature	-40 to 200		
Slump/sag	0		
Shore A Hardness	30		
Solids	100%		
UV rating	Excellent		
Glossy Finish	Yes	Contraction of the second	
GENERAL SPECIFICA	FIONS:		
Paintable	Yes		
Permanently Elastic	Yes		ECO-BOND
Odor	Low		The Environmentally Safe Adheave
Moisture Curing	Yes		Heavy Duty
Staining	0		
Shrinkage	Non		Bonds ^{&} Seals ^{to:}
Non Flammable	Yes		Aluminum
Can be used in a confined space	Yes		
Tack Free	25 Min		Ceramic Masonry ⁶ Brick Brick
Color	White		Glass
GENERAL APPLICAT	IONS:		PVC .iso Metal
Can be applied to:			
Wood			en estas styrofoant Wood Wood
Metal			And many
Fiberglass			et plastics
Drywall, Paneling			
Glass			
Siding, Wood, Cement, Vinyl, Aluminum			
PVC			
Laminate			
Concrete			
Tile			Vetery W
Foam		Print and a state of the	Tely Weather Proof 10.1 fl. oz. (304 ml)
2 non porous surfaces			
GREEN ATTRIBUT	ES:		
Materials listed on Prop 65 CA	None		
Meets all California Standards	Yes		
CARB Compliant	Yes

ECO-BOND HD100

Product Description

ECO-BOND HD100 is a moisture curing, modified polymer adhesive/sealant designed for application in damp, dry or cold climates. ECO-BOND HD100 is petroleum free, solvent free and contains no isocyanates. ECO-BOND HD100 will not shrink upon curing, will not discolor when exposed to UV light, and can not "outgas" or bubble on damp surfaces urethane sealants often do. ECO-BOND HD100 has excellent adhesion to most construction materials and resilient "elastomeric" properties. ECO-BOND HD100 is capable of joint movement in excess of 25% compression and extension. Because it cures in wet or dry climate conditions and at low temperatures (30° F), ECO-BOND HD100 can be used effectively in almost all applications.

Applicable Performance Standards

- ASTM C-920, Type S, Grade NS, Class 25, Uses NT, T, M, G, A and O
- Federal Specification TT-S-00230-C Type II, Class A
- Corps of Engineers CRD-C-541, Type II, Class A
- Canadian Standards Board CAN 19, 13-M82
- Conforms to OTC Rule for Sealants and Caulks
- Meets requirements of California Regs: CARB and SCAQMD
- Conforms to California Proposition 65
- Conforms to USDA Requirements for Non-food Contact

Green Standards:

- LEED 2.2 for New Construction and Major Renovations: Low Emitting Materials (Section 4.1) 1 Point
- NAHB Model Green Home Building Guidelines: 5 Global Impact Points
- VOC Content at 249° F: less than 19 grams/liter (including water), ASTM D2369, EPA Method 24

Colors

White, Gray, Tan

Application Instructions

1. Remove all dirt, oil, loose paint, frost and other contamination from all working surfaces with alcohol. DO NOT USE petroleum solvents such as mineral spirits or xylene.

- 2. Maintain ECO-BOND at room temperature before applying to ensure easy gunning.
- 3. Test and evaluate to ensure adequate adhesion.
- 4. Apply with a quality caulk gun.
- 5. Cut the cartridge nozzle at a 45° angle and to the desired gauge/length.
- 6. Puncture inner seal and carefully gun the sealant with a smooth, continuous bead.
- 7. If tooling is needed, do so within fifteen minutes.

8. Install all joint applications per ASTM and SWRI recommendations and guidelines. Joints shall be designed with a depth to width ratio of 1:2 (joint depth one-half the width).

9. Apply in temperatures above 30 degrees

- 10. Remove any standing water
- 11. Clean up wet ECO-BOND with alcohol, cured product maybe removed with abrasion.
- 12. Do not consume
- 13. Properly dispose of any unused product.
- 14. Keep out of reach of children

*Test and evaluate to ensure adequate adhesion.
